Upload to GitHub

1. Extract the supplied ZIP locally.
2. Create an empty repository in your GitHub account, for example `python-learning-pathway`.
3. Upload the contents of the project folder while preserving subfolders. Confirm README.md appears at repository root. Alternatively, run the commands below inside the extracted project folder.
4. Replace YOUR_USERNAME and YOUR_REPOSITORY with your actual values. Review every file before publishing.

```
git init
git add .
git commit -m "Add Python learning pathway capstone"
git branch -M main
git remote add origin https://github.com/YOUR_USERNAME/YOUR_REPOSITORY.git
git push -u origin main
```

These commands are instructions, not a claim that a repository has been created. Authenticate using GitHub's supported method; do not paste credentials into project files. Choose private visibility if your institution restricts assessment sharing. Add your real repository URL to your submission only after confirming it works.
