Four-week daily plan

Each session: 5 min retrieval + 7 min worked example + 13 min independent coding + 5 min tests/reflection = 30 minutes. On practice days, prioritize an honest attempt over finishing every exercise. Complete unfinished work during the review session; do not silently extend the daily allocation.

Day	Week	Topic	Independent task
1	1	Run Python and print	Print a three-line self-introduction.
2	1	Variables and types	Store name, age and study hours; predict each type.
3	1	Arithmetic	Calculate a rectangle area; try a zero side.
4	1	Strings	Build a greeting and measure its length.
5	1	Input and conversion	Read an age using input and convert it with int.
6	1	Review and practice	Solve P01-P05; explain one result without running.
7	1	Week 1 checkpoint	Explain input versus conversion and redo two missed tasks.
8	2	Comparisons and booleans	Predict five comparison expressions.
9	2	If and else	Implement an even/odd decision.
10	2	Elif and boundaries	Classify scores; test 39, 40, 59, 60, 79, 80.
11	2	For and range	Print 1 through 10; explain the excluded endpoint.
12	2	While loops	Trace a counter from 1 to 5 and show termination.
13	2	Loop practice	Solve P06-P10 and test zero where allowed.
14	2	Week 2 checkpoint	Write and trace one loop without AI help.
15	3	Lists and indexing	Access first and last items in a list.
16	3	List methods and mutation	Append values and compare original with a copy.
17	3	Dictionaries	Store a student record and look up a key.
18	3	Functions and return	Write a two-argument function and reuse its result.
19	3	String traversal	Count vowels using a loop.
20	3	Collections practice	Solve P11-P15 and test an empty input.
21	3	Week 3 checkpoint	Explain return versus print; count repeated items.
22	4	Exceptions and validation	Catch ValueError for invalid numeric input.
23	4	Problem decomposition	Write pseudocode for a score tracker.
24	4	Boundary testing	Solve P16-P20; test empty and invalid inputs.
25	4	Mini-project build	Run mini_project.py and explain every function call.

Day	Week	Topic	Independent task
26	4	Mini-project extension	Add a highest-score display and two test cases.
27	4	Independent review	Redo two difficult tasks; complete the quiz unaided.
28	4	Final demonstration	Run tests, generate a draft and record honest outcomes.
