Fifteen-question quiz

One mark per question; total 15. No AI or answer key during assessment. For Q14, award 0.5 per correct test. For Q15, award 0.5 for rejecting eval and 0.5 for a safe conversion alternative.

1. What type does input() return?
2. What does int("12") + 1 evaluate to?
3. What does 7 // 2 evaluate to?
4. Which operator compares two values for equality?
5. What does len("a b") return?
6. What values are produced by range(1, 4)?
7. What is [10, 20, 30][0]?
8. What does a function without a return statement return?
9. What does [1, 2].append(3) return?
10. What exception does int("abc") raise?
11. Why can a while loop run indefinitely?
12. What does {"a": 2}["a"] return?
13. After a = [1]; b = a; b.append(2), what is a?
14. Give two important tests for sum_to_n beyond a positive example.
15. How should you respond to an AI suggestion to use eval(input()) for numeric entry?
