AI-tool evidence and research log

Current status

Perplexity-assisted drafting and public web research were used for preparing these materials. Python execution is recorded separately. Python, Colab and GitHub do not automatically count as distinct AI tools. No use of ChatGPT, Gemini, NotebookLM, Gamma, Elicit or Consensus is claimed here.

Student completion plan

Use at least four distinct AI tools with available free access. Suggested roles: Perplexity (discovery), Elicit or Consensus (second research tool), ChatGPT or Gemini (tutor critique), NotebookLM or Gamma (source-grounded summary or slides). Check current access and institutional requirements yourself. Select four tools you actually used, not simply four names in this document.

Tool	Exact task/query	Date	Output/screenshot path	Verified source or code check	Completed?
Perplexity	Record your own session and source checks	Pending	Pending	Pending	Pending student evidence
Elicit or Consensus	Research beginner misconceptions	Pending	Pending	Check paper title/DOI/abstract	No
ChatGPT or Gemini	Critique one exercise and tutor one attempt	Pending	Pending	Run changed code	No
NotebookLM or Gamma	Summarize credited sources or improve deck	Pending	Pending	Compare every factual claim	No

Research record template

- Tool and access tier:
- Actual date:
- Exact query:
- Returned source:
- Claim supported:
- What you opened and checked:
- Limitation or disagreement:
- What changed in your project:

Avoid uploading personal information in evidence. Never label planned activity as completed. The two-research-tool and four-AI-tool requirements remain open until you fill this log with genuine work.
